

Application Example

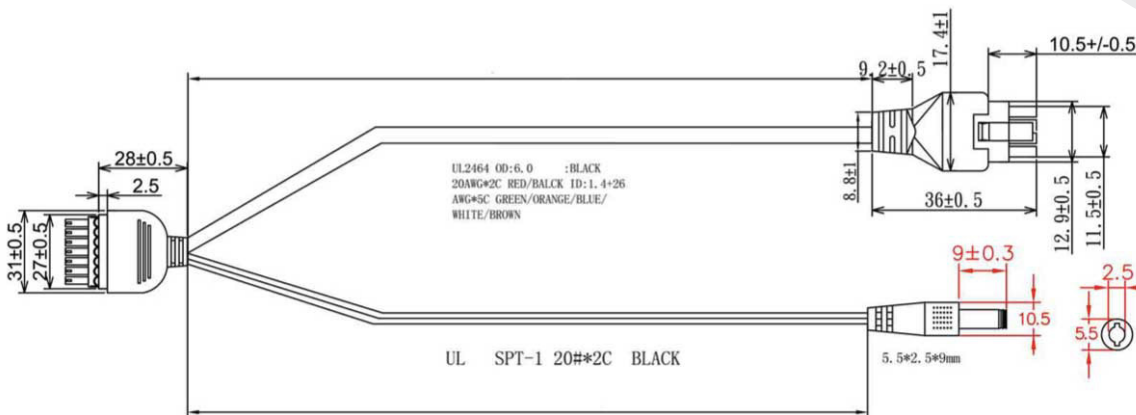

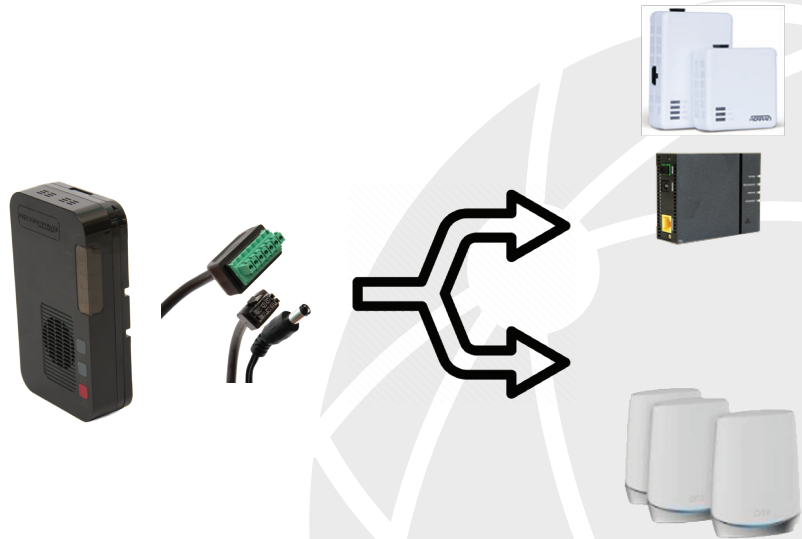

APPLICATION

To power a simple ONT and the Wi-Fi system when using separate units.

Wireless networks are undergoing a serious redesign due to the increased requirement for their reliability, speed and coverage.

In many cases, traditional Wi-Fi (Wi-Fi modem / router combo) does not provide adequate service and coverage throughout the entire house. Wi-Fi mesh network architecture has finally gained momentum and is quickly becoming the proper way of designing and installing Wi-Fi networks.

In simple terms it is a Y shaped cable that can power both the ONT and the wireless gateway.

INFORMATION TO PROVIDE

We will need to collect information about the devices being powered by this setup, to specify the right power connectors. Email Sales@GoPrecisionGroup.com and provide information about which ONT and Gateway will be powered by the power supply and UPS.
